

Identify, Target, Track.

Vindicet's health data system (VHDS) is a performance management reporting system designed exclusively for long term acute care hospitals. With VHDS you can identify areas for improvement, establish realistic targets and track your progress against goals.

Questions VHDS can help you answer...

How do my patient outcomes compare to other LTACHs? (vent weaning,

How do my costs per-patient-stay compare to other LTACHs treating

How am I doing on my most important quality measures?

What types of patients do we do best with?

How do my ancillary costs compare to other hospital's, and where are my opportunities for cost reduction?

Where are my biggest opportunities for improvement?

What types of patients are other LTACHs treating that we are currently not seeing?

What are the characteristics of my high cost outlier cases? (LOS, cost per patient day, DRG, acute LOS, complications and outcomes)

Which hospitals are doing the best job of preventing adverse events?

More Value from Your Data

Easy Implementation

VHDS combines member-submitted data with MedPAR Claims Data and LTCH Cost Report Data. You can start running meaningful reports for your hospital the first day you start - before you submit any data at all!

VHDS is a secure, web-based, HIPAA compliant data repository that is always up-to-date. Affordable, monthly subscription with as many users as you want. Cost covers training, hosting and support.
